

COURSE REPORT
MODEL THEORY 7.5 HEC
LOG211, 2021

- Main instructor/examiner: Fredrik Engström

REGISTRATIONS AND RESULTS

- 9 students (7 programme and 2 free standing students) registered for the course.
- 5 students handed in the first set of problems and 4 (3 programme and 1 free standing) students passed the course, all with VG.
- The student completion rate ("genomströmningen") was 44 %.

INTRODUCTORY REMARKS

The course is given both as part of the first semester of the Master Programme in Logic as well as a free standing course. This was the third time the course was given, this time with a new course code due to a change in the prerequisites.

The course was taught entirely over Zoom.

STUDENTS' ASSESSMENTS

Only two students answered the anonymous web based course evaluation, even though the students were reminded several times. Thus no report could be generated (the system needs at least three answers to generate a report).

SUGGESTIONS FOR CHANGES

No planned changes, but hoping for the possibility of a campus taught course next time.
